

Copy video to USB Drive

1. Click the **Play** button.
2. Select search by time, set a date and time relative to the start of the incident
3. Then press the **Play** button. This will launch the player.
4. Once you have located the start of the incident you can create a clip of that incident. To do this click 
5. To start the clip press the  button. This will create a tick mark on the scroll bar identifying where the clip has started.
6. To end the clip press the  button. This will create a tick mark where the video clip ends.
7. Once this is done you can save the clip by pressing the **Save** button. This saves the video clip under the same date folder as the original file under a directory called **Clip**.
8. To review the clip you just created press the  button. You can then close the player application.
9. Then click the **files mode** button. This will bring up the Files Mode playback view.
10. From here you should click on the + next to **Cam SS Host**, then click on the + next to the video folder, then the desired date.
11. Next select the Video, Clip, or Picture folder, then click on the file once to highlight it.
12. When the desired file(s) are highlighted click the **export** button.
13. Use the drop-down menu to select the USB Drive, then click OK.
